**DETAILED ACTION**

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 5/14/08 has been entered.

***Claim Objections***

2. Claims 1-9, 11-14 and 16-20 are objected to because of the following informalities: after "mobile station" is defined as "MS", each occurrence of "mobile station" in claims 1-9, 11-14 and 16-20 should be changed to "MS". Appropriate correction is required.

***Claim Rejections - 35 USC § 112***

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claim 20 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

5. It is unclear whether the "mobile station" recited in lines 3 and 5 refers to the first or second mobile station. Appropriate correction is required.

***Allowable Subject Matter***

6. Claims 1-19 are allowed.
7. Claim 20 would be allowable if written to overcome the rejection under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.
8. The following is an examiner's statement of reasons for allowance: the prior art fails to disclose the recited combinations of elements and steps in wireless communications between a GSM network and a CDMA network, including wherein, when a mobile station is a CDMA mobile station (MS) with a subscription in the GSM network, the general global gateway (GGG) acts as an authentication controller in the CDMA network during registration of the MS but authenticates the MS using the GSM authentication mechanism, and wherein the MS is placed in a short message service (SMS) only status during authentication, as set forth in claims 1, 7, 12 and 17.
